EXECUTIVE SUMMARY

This report provides information on retention, graduation, and transfer rates for students entering Maryland community colleges as first-time, full-time students between 1994 and 2014. This edition of this report includes data about student outcomes two, three, and four years after matriculation.

Of the 15,909 full-time students entering in fall 2012, 47.0% had graduated, transferred to a four-year institution, or remained enrolled at their original community college after four years. This represents a 2.2 percentage point increase in the student success rate from that of the 2011 cohort; among those students, 44.8% had achieved one of those same outcomes within four years. This is also the highest four-year success rate at Maryland's community colleges since the 2007 cohort. However, the increase in the success rate is largely driven by an increase in transfer; the percentage of students who remained enrolled at their original institution actually declined.

This report also utilizes an alternative method of examining student success, the Degree Progress Analysis model. Developed in 2005, this approach provides information about more students (including part-time students) and examines more measures of student success. Additionally, the Degree Progress Analysis classifies students based on their degree of readiness for college-level coursework at the time of entry, allowing a more detailed examination of student outcomes. Graduation and transfer rates for the Fall 2011 entering cohort remained steady at 48.3%.

INTRODUCTION

This report provides information on the retention, graduation, and transfer rates of first-time, full-time students entering Maryland community colleges between 1994 and 2014.¹ The Appendix includes detailed data tables containing retention, graduation, and transfer information for all students statewide, by gender, and the largest racial and ethnic groups.² The tables record student outcomes two, three, and four years following matriculation.

The first section of this report contains analysis of student retention, graduation, and transfer rates for all students statewide as well as rates disaggregated by race/ethnicity and gender.³ This analysis examines both year-to-year changes and longitudinal trends.

The second section of the report examines the Degree Progress Analysis. This model is an alternative method of examining student success that includes a broader population of students and considers additional outcomes. This method was developed by a workgroup established by the Maryland Council of Community College Presidents in cooperation with the Maryland Higher Education Commission, and was incorporated into the performance accountability process following the 2006 cycle.

Finally, the third section provides a summary of data obtained in the community college follow-up survey. This survey is conducted by the community colleges and the Commission, and includes questions regarding graduates' perception of institutional quality, post-graduation enrollment, and employment outcomes, in addition to a variety of other topics.

¹ Since 2004, the Commission has had the ability to follow Maryland residents who transfer to Maryland state-aided independent institutions in order to provide a more complete view of transfer activity. Figures since the 2000 entry cohort may include transfers to both public and independent Maryland institutions.

² New federal race/ethnicity guidelines were introduced in 2010. Figures before and after 2010 may not be directly comparable.

³ Previous iterations of this report have excluded students of unknown gender within the gender disaggregations. However, data since 2010 has been updated to include students of unknown gender with a randomly assigned category, consistent with other reporting performed by MHEC.

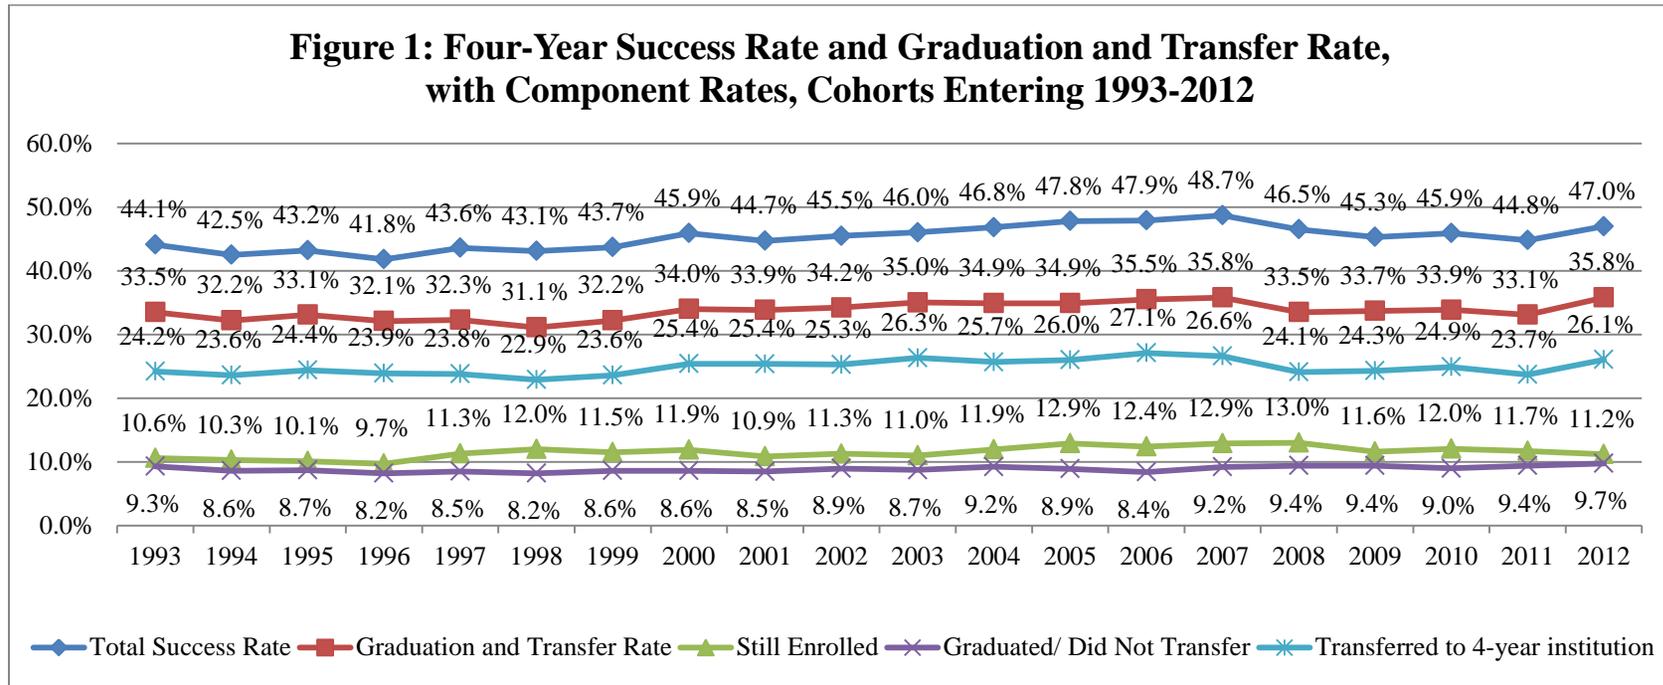

DATA DEFINITIONS

<p>Retention, Graduation, and Transfer Cohorts: First-time, full-time freshmen</p>	<ul style="list-style-type: none"> • <u>Still Enrolled</u>: Student was retained at original community college or transferred to another Maryland community college. • <u>Graduated/Did not Transfer</u>: Student graduated from a Maryland community college with an associate degree or lower-division certificate and did not transfer to a Maryland four-year institution. • <u>Transferred to Four-Year</u>: Student transferred to a Maryland four-year institution, with or without a degree or certificate. <p><i>Note: The Maryland Higher Education Commission does not have the ability to follow students who transfer to out-of-state institutions.</i></p>
<p>Degree Progress Analysis Cohorts: Students who attempted at least 18 credit hours within two years of matriculation</p>	<ul style="list-style-type: none"> • <u>College Ready</u>: Student required no remediation or developmental education coursework. • <u>Developmental Completer</u>: Student was assessed to need remediation in at least one area, and within four years completed all of the recommended remedial coursework. • <u>Developmental Non-Completer</u>: Student was assessed to need remediation in at least one area and after four years had not completed all of the recommended remedial coursework. • <u>Successful Persister</u>: Student earned at least 30 credits with a cumulative Grade Point Average of at least 2.0 AND either: 1) graduated and/or transferred to a four-year institution; or 2) is still enrolled. <p><i>Note: The Degree Progress Analysis includes information on transfers to out-of-state institutions as obtained by the community colleges from the National Student Clearinghouse and other sources.</i></p>

ANALYSIS

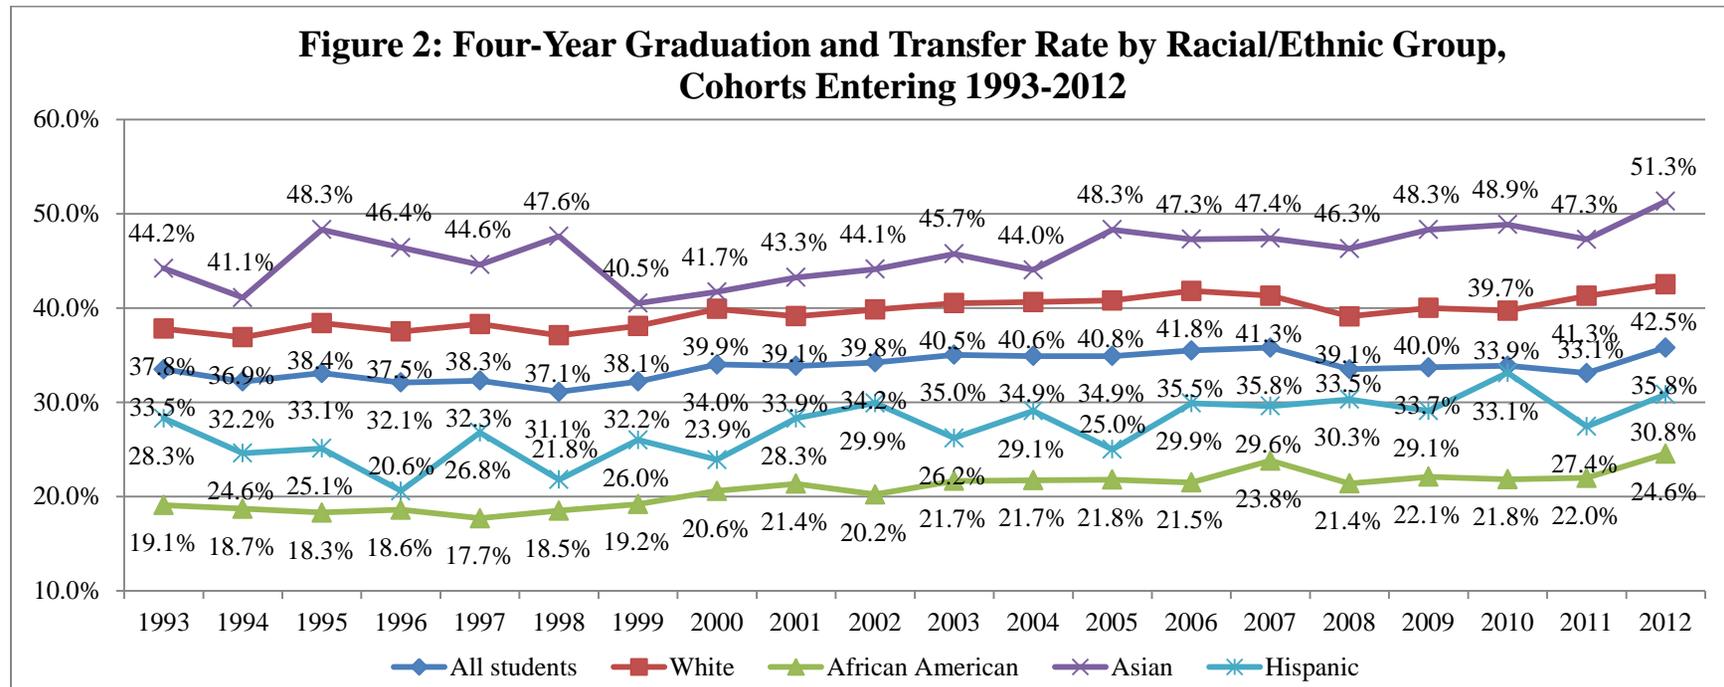

All Students

As Figure 1 illustrates, both the four-year overall success rate and the graduation and transfer rate increased for the Fall 2012 cohort. Of all first-time, full-time students entering in Fall 2012, 47.0% either graduated from the community college with a certificate or associate degree, transferred to a four-year Maryland institution, or remained enrolled after four years. This represents a 2.2 percentage point increase over the Fall 2011 cohort success rate of 44.8%. This also represents the highest overall success rate since that of the 2007 cohort (48.7%). A similar trend was seen in the graduation and transfer rate, which increased by 2.7 percentage points, from 33.1% to 35.8%. This graduation and transfer rate matches the highest in the past twenty years, which also was achieved by the 2007 cohort (48.7%). The primary driver of this change was an increase in the transfer rate; transfer increased by 2.4 percentage points (23.7% to 26.1%). In addition, the percentage of students graduating without transferring increased by 0.3 percentage points, from 9.4% to 9.7%, which is the highest rate on record.

By Race/Ethnicity

Figure 2 presents the four-year graduation and transfer rate for students disaggregated by racial/ethnic group.⁴ As this figure illustrates, graduation and transfer rates increased for all racial/ethnic groups for the first time in 20 years. Most notably, the graduation and transfer rate for African Americans (24.6%) was the highest on record for this group. However, there continue to be persistent gaps between racial and ethnic groups in the rate of graduation and transfer, and there are substantial differences in the rate of increase by group. For example, while the graduation and transfer rate for Asian students increased by 4.0 percentage points, from 47.3% to 51.3%, the rate for white students increased by 1.2 percentage points, from 41.3% to 42.5%. This uneven increase also resulted in a widening of the achievement gap. While the gap in the graduation and transfer rate between the population with the lowest (African American, 22.0%) and highest (Asian, 47.3%) stood at 25.3 percentage points for the Fall 2011 cohort, this gap increased to 26.7 percentage points for the Fall 2012 cohort (with graduation and transfer rates of 24.6% and 51.3%, respectively).

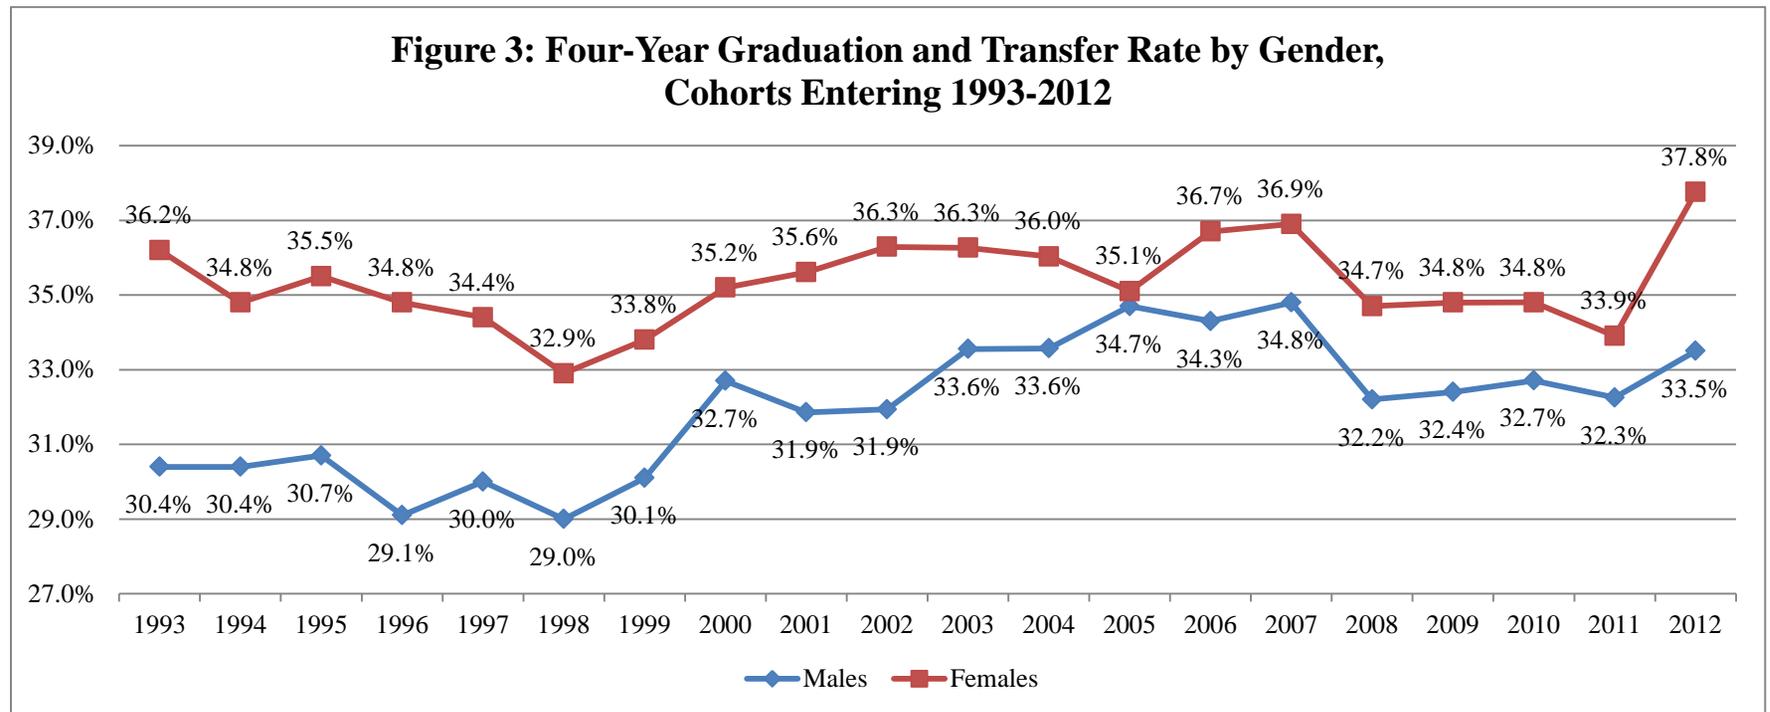

⁴ While these data include only the four largest racial and ethnic groups, students of all races are included in the all students and gender analyses.

The disaggregated data also reveals that the number of white students in the analysis cohort has been dropping significantly. The number of students in the 2012 entering cohort was 7,759, a decrease of 287 from the 8,046 in the 2011 cohort and a decrease of 1,680 from the 9,439 students in the 2009 cohort, which was the largest cohort overall. That is a decline of 18% over three years. The decline accelerated in the 2013 and 2014 entering cohorts, so that the 2014 cohort included 6,486 students, down by 2,953 students or 31% from the 2009 peak. While there have been some decreases in every racial and ethnic group except for Hispanics, the rate of decline is highest among whites. This decrease appears to be related to the decrease in the number of white high school completers between 2009 and 2014. During that period, the number of white high school completers decreased by 3,642, compared to the decrease of 2,953 among white first-time, full-time community college students.

By Gender

Consistent with historical trends in Maryland as well as national trends, female students continue to outpace their male counterparts, as shown in Figure 3. For each of the last 20 years in Maryland, females have had higher graduation and transfer rates than males. This gap has generally declined over time. For the cohorts entering between 1993 and 2002, the average achievement gap stood at 4.3 percentage points; since 2003, this has decreased substantially, to 2.3 percentage points. However, the graduation and transfer rate for females in the 2012 cohort increased more, from 33.9% to 37.8%, than did the rate for males (from 32.3% to 33.5%). This unusual result marks the largest gap since the 2002 cohort. This is most likely a random variation, but it will be important to see whether the gap continues to widen in future cohorts.

DEGREE PROGRESS ANALYSIS

As discussed in the introduction to this report, the Degree Progress Analysis (DPA) is an alternative model of examining student success. While the graduation and transfer rates utilize first-time, full-time students as their analysis cohort, the DPA model recognizes that students may enroll with a wide variety of motivations, including such outcomes as job preparation or personal enrichment that do not include obtaining a degree. The DPA model accounts for this by focusing only on students whose enrollment behavior suggests that they intend to complete a degree or to transfer. The DPA examines student outcomes only for those students attempting 18 credits, including developmental credits, within the first two years of entry to the community college. Of the 28,959 first-time students in Maryland's community colleges in Fall 2011, 18,872 (65.2%) are included in the DPA cohort.

There are two other types of outcomes recorded in the Degree Progress Analysis. MHEC follows students enrolled within the state and is able to include only students who have transferred to a Maryland institution in the graduation and transfer rate. The Degree Progress Analysis, however, uses data obtained from other sources, including the National Student Clearinghouse, to include student transfer to both in-state and out-of-state two-year and four-year institutions within the Degree Progress Analysis. Additionally, the DPA identifies a category of students as "Successful Persisters": students who have graduated or transferred, remain still enrolled, or who have completed 30 or more credits with a GPA of at least 2.0.

When reporting student outcomes in the Degree Progress Analysis, community colleges further classify students into three groups based on their degree of college readiness: College Ready, Developmental Completers, and Developmental Non-Completers. Figure 4 shows the distribution of students by category. College Ready students are considered by the institution to be prepared to enroll directly in college-level coursework; in 2011, 23.5% of the analysis cohort was comprised of members of this group. Developmental Completers are those students who are assessed to need some form of remedial coursework in English, Math, or Reading, and complete those assigned sequences; among 2011 entrants, 44.0% of students were classified as Developmental Completers. The remaining 32.5% of students are in the Developmental Non-Completers category, in which students were assigned to need developmental coursework in one or more subjects and did not complete all of those required courses.

Figure 4: Degree Progress Analysis Cohort, Fall 2011

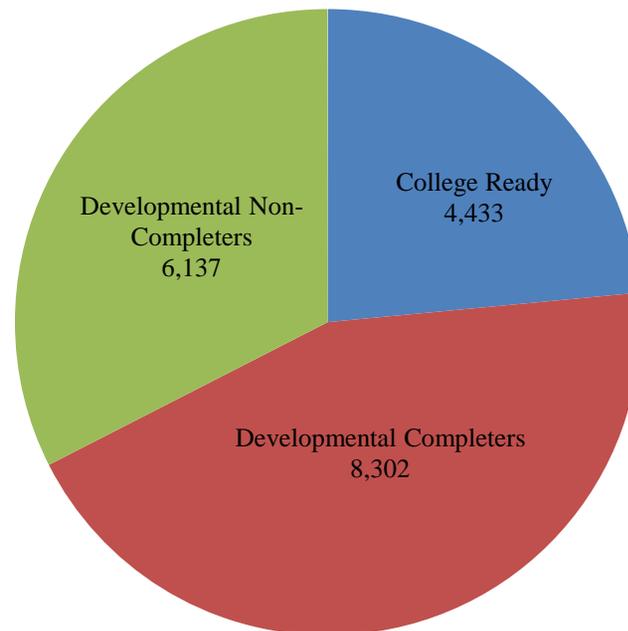

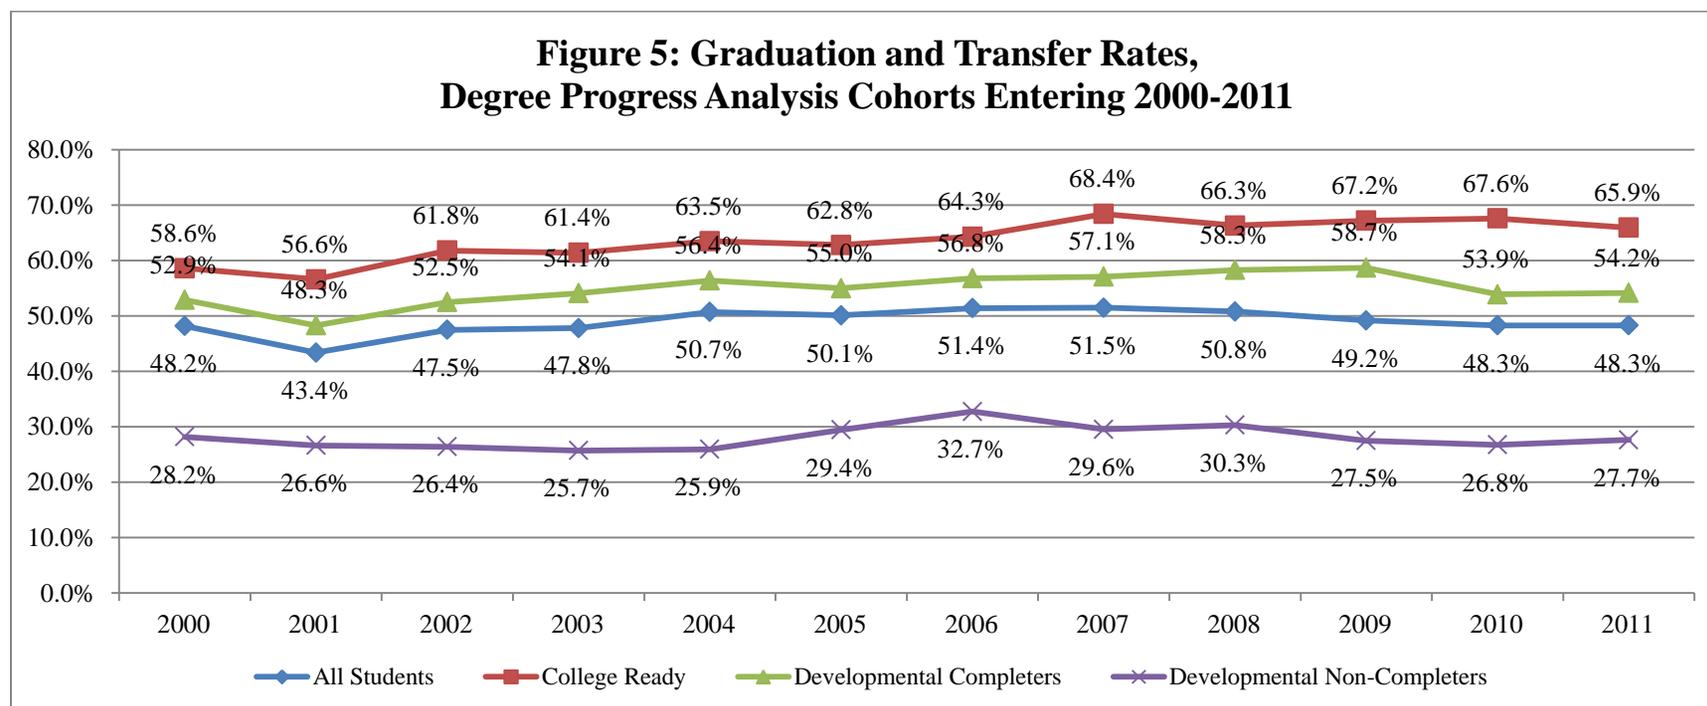

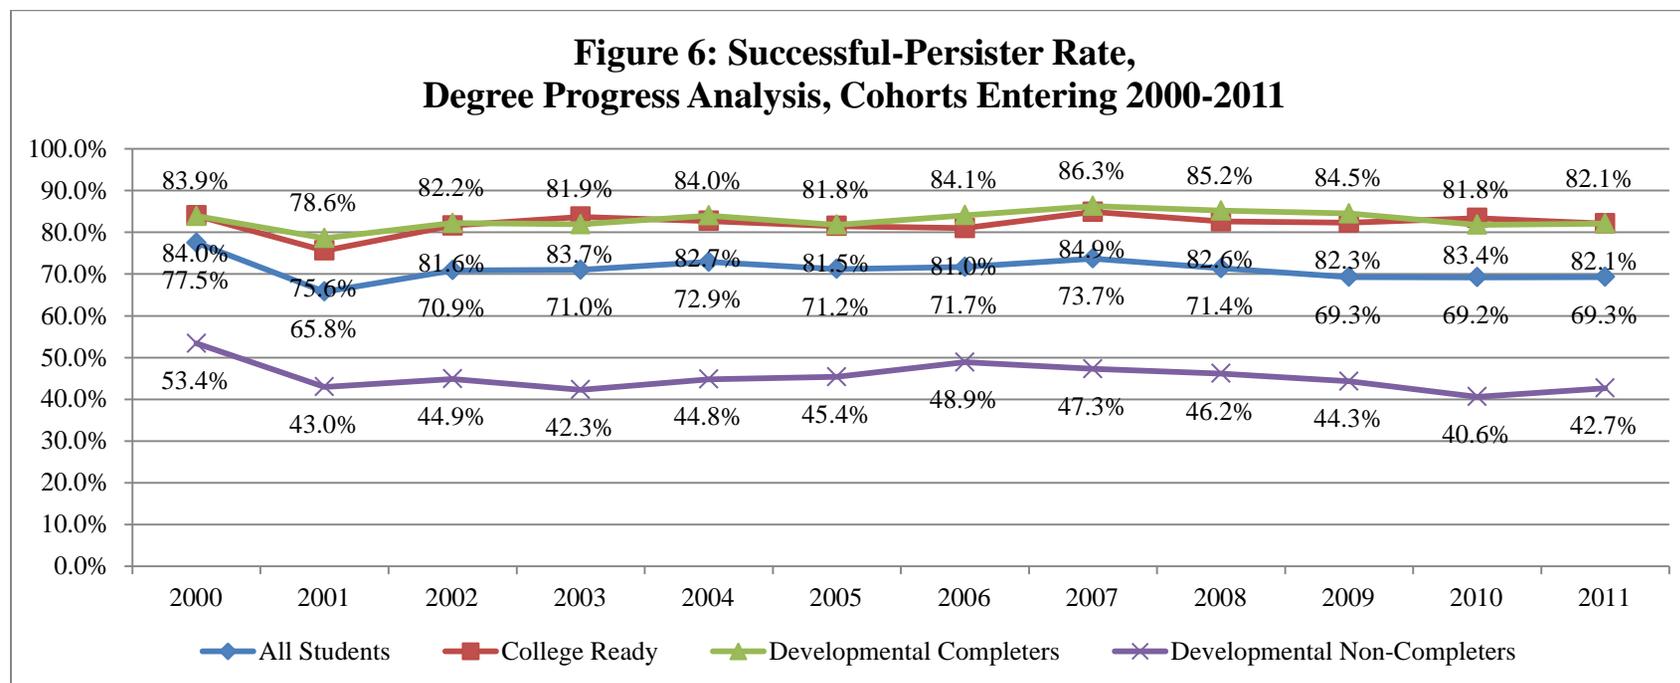

Figure 5 shows the overall four-year graduation and transfer rate for students in the DPA, as well as the rates for each of the three categories of students listed above. This rate held steady at 48.3%, with a decrease in graduation and transfer among College Ready students offset by increases for the other two groups. However, there are substantial differences in graduation and transfer rates between these groups that have persisted over time. What is particularly notable is that the most recent graduation and transfer rate for Developmental Completers (54.2%) is nearly double the rate for Developmental Non-Completers (27.7%). While College Ready students continue to maintain a graduation and transfer rate higher than that of students assessed to need remediation at entry, the fact that students who are assessed to need and complete developmental coursework have such substantially higher rates of graduation and transfer suggests the effectiveness of those courses. However, there may be additional factors influencing a student's likelihood of success that cannot be identified through this analysis.

As Figure 6 shows, this same effect occurs with the successful-persister rate. The successful-persister rate for Developmental Completers (82.1%) among Fall 2011 entrants is identical to that of College Ready entrants. The rates for both of these populations are nearly double that of Developmental Non-Completers (42.7%). Additionally, while successful-persister rates for both College Ready and Developmental Completers have remained fairly stable since the 2000 cohort, the rate for Developmental Non-Completers has dropped substantially over that time, from 53.4% to 42.7%.

As the Degree Progress Analysis data indicate, there is a substantial difference in achievement between those who either enter as College Ready or who complete required developmental courses compared to those who do not complete developmental coursework that they were assessed to need. The greater parity of performance of students entering as College Ready and those who complete remedial courses suggests that the completion of remedial coursework contributes to student success.

It is important to remember that these results refer to the 2011 cohort, not the 2012 cohort discussed in the first and second sections of this report. While the DPA cohort differs substantially from the first-time, full-time cohort utilized in calculating graduation and

transfer rates, the trend in outcomes is generally similar to that of the conventional rates. Next year's report may provide some additional insight into the increased rate of graduation and transfer seen among the 2012 cohort of first-time, full-time students.

COMMUNITY COLLEGE FOLLOW-UP SURVEY

The Maryland Higher Education Commission collaborates with the community colleges to administer a follow-up survey of recent certificate completers and associate degree recipients. This survey collects information on educational and labor market outcomes, as well as recipients' satisfaction with the institution and its effectiveness in preparing them for the workforce and/or further study. Additionally, recognizing that students may have a number of motivations driving them to enroll at the community college, the survey asks questions regarding their initial objectives and their success in achieving those goals. The most recent iteration of this survey for which data are available was conducted in Fall 2015 and examined students receiving an associate degree or certificate during the 2014 fiscal year.

Community college completers continue to express satisfaction with their overall community college experience; of the 2,619 responding to the 2015 survey, 88.2% rated their experience either "very good" or "good."

Following completion of their program at the community college, just over half (53.8%) continued to take postsecondary courses, either at a community college or four-year institution. Nearly three-quarters (74.0%) of students transferring to a four-year institution continued their studies at a Maryland college or university. Most (79.4%) reported satisfaction with the academic preparation they received at the community college.

Following completion of their program at the community college, the vast majority of respondents (89.0%) reported employment in some capacity, whether full-time or part-time. Most (84.3%) of those working full time reported that they remained within the state, and an additional 10.4% remained within the region.

Further results from the 2015 survey can be found in the full report, *Follow-Up Survey of 2014 Maryland Community College Graduates*, accessible via the Commission website.

Results from the 2017 Graduate Follow-Up Survey of FY 2016 graduates will be reported by MHEC in Fall 2017.

CONCLUSION

In conclusion, retention, graduation, and transfer at Maryland's community colleges have remained relatively stable over the past two decades. However, the student success rate for the Fall 2012 cohort (47.0%) represents the highest rate since that of the 2007 entering class. This increase is largely driven by the increased percentage of students transferring; the percent of students remaining enrolled at their original institution four years after entry actually declined slightly.

The overall relative stability of the graduation and transfer rates does mask a number of trends within demographic groups, however. While the graduation and transfer rate for each of the four largest racial and ethnic groups increased for the first time in 20 years, those increases did not all occur at the same rate. While African American students achieved their highest rates of graduation and transfer in the past 20 years, a persistent achievement gap remains, particularly affecting African American students. Additionally, the 2012 cohort saw a widening of the achievement gap between males and females to its highest rate since the 2002 entering class. While there appears to be long-term progress in reducing or eliminating those gaps, there remains a substantial amount of work to be done to eliminate them.

As Maryland continues to make progress on its goal of 55% of Marylanders possessing at least an associate degree, the state's community colleges play an increasingly critical role in ensuring that all have access to a quality education. As we work toward that goal, the long-term improvement in graduation, transfer, and overall student success are all indicators that the community colleges continue to move in a positive direction.

Notes:

Successful Persister is defined as students who completed at least 30 credit hours with a GPA of 2.00 or better, who have graduated and/or transferred, or who are still enrolled at the institution

Totals reflect summation of cohort data as reported by the colleges, and derived percentages based solely on the reporting institutions. These may provide an "indication" or estimate of the statewide community college success levels, but should not be relied upon as a completely accurate measure at the statewide level.
