EXECUTIVE SUMMARY

This report provides retention, graduation, and transfer rates for first-time, full-time students entering Maryland community colleges between 1991 and 2011. The report includes information on student outcomes between one and four years following matriculation.

For the past two years, the overall success rate has declined. Of the 16,746 students who enrolled as first-time, full-time freshmen in Fall 2009, 45.3% of students graduated, transferred, or were still enrolled four years later. The decline in this year's total success rate is mainly driven by a drop in the number of students still enrolled.

The report also examines student success through an alternative model, the Degree Progress Analysis. This model accounts for a larger percentage of students than traditional retention/graduation measures, includes a broader range of student outcomes, and provides analysis based on a student's readiness for college at time of entry. Degree Progress Analysis data indicate that four-year graduation and transfer and student success or persistence rates have both slightly declined for the Fall 2008 cohort.

OVERVIEW

This report provides information on the retention, graduation, and transfer rates of first-time, full-time students entering Maryland community colleges between 1991 and 2011.¹ The report includes information on retention and graduation of students within two, three, and four years of matriculation at a Maryland community college. The Appendix also presents detailed tables containing data on retention, graduation, and transfer for all students statewide and for the largest racial and ethnic groups.² Additionally, data tables are presented for each institution containing data for all students and for African American students.

The first section of this report provides analysis of retention, graduation, and transfer data for all students statewide in addition to breakouts by race/ethnicity and gender. Both year-to-year changes and long-term trends are examined.

The second section contains the Degree Progress Analysis. This model, developed by Maryland community colleges in collaboration with Commission staff, is an alternative measure of student success. The model examines a broader population of students and takes into account additional outcomes. The cohort for the Degree Progress Analysis includes any student who attempts 30 credits within two years of entering the community college.

Finally, the third section provides a summary of data obtained from the community college follow-up survey. This survey is conducted every three years by the Maryland Higher Education Commission in collaboration with the community colleges and is administered to all recipients of certificates and associate degrees. This survey includes a series of questions concerning recipients' perception of the quality of education, post-graduation enrollment, and employment outcomes.

¹ Prior to 2004, the Commission tracked data on transfers to Maryland public institutions only. Since 2004, however, the Commission has tracked transfer of Maryland residents to Maryland private institutions in order to provide a fuller view of transfer activity. Figures since 2004 include transfers to both public and private Maryland institutions.

² New federal race/ethnicity guidelines were introduced in 2010. Figures before and after 2010 may not be directly comparable.

DATA DEFINITIONS

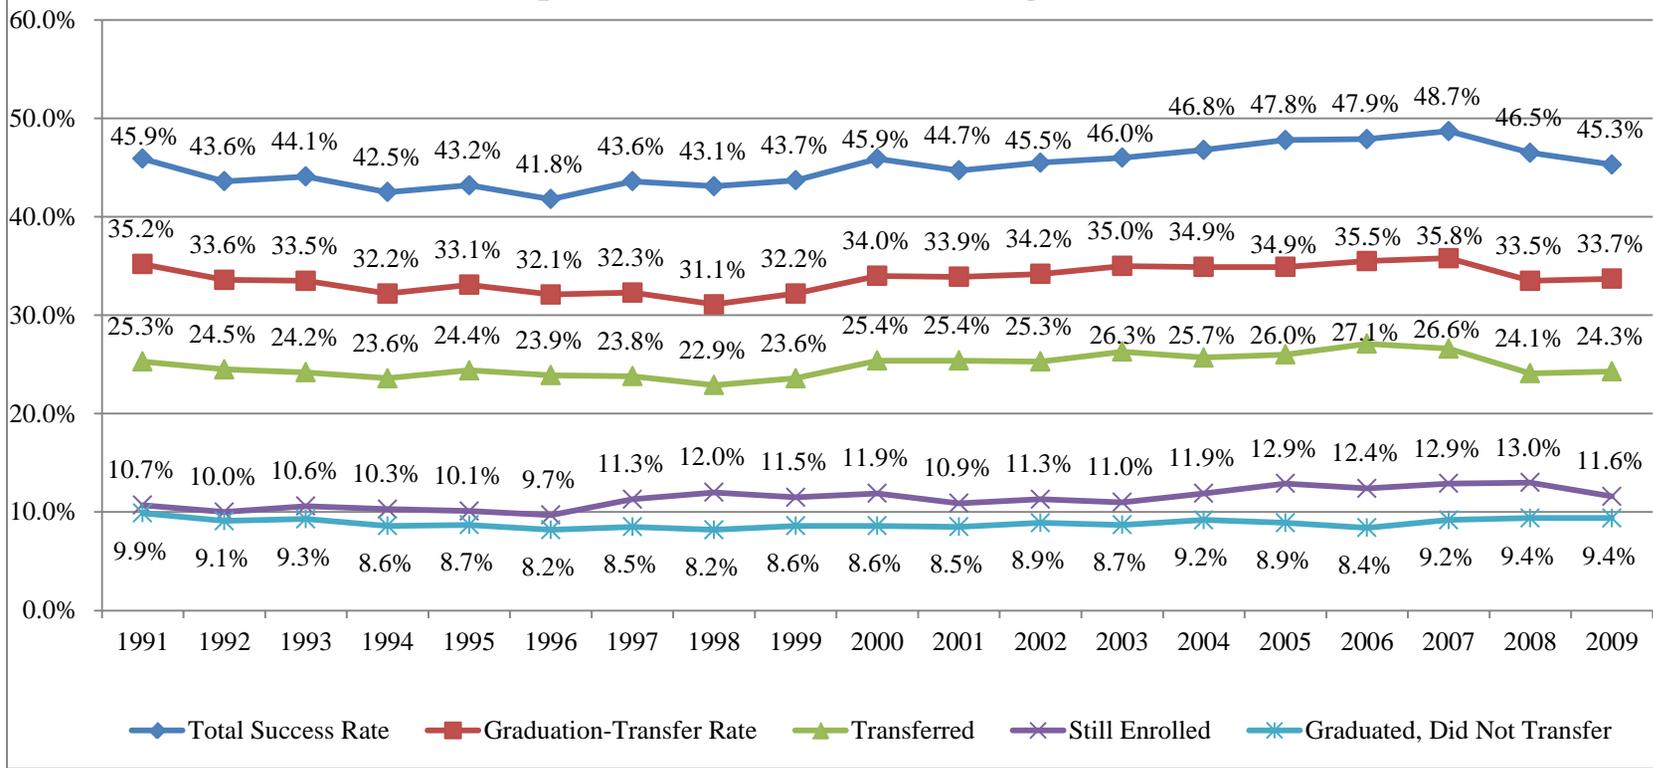

<p>Retention, Graduation and Transfer Cohorts: First-time, full-time freshmen</p>	<ul style="list-style-type: none"> • <u>Still Enrolled</u>: Student was retained at original community college or transferred to another Maryland community college. • <u>Graduated/Did not Transfer</u>: Student graduated from a Maryland community college with an associate degree or lower-division certificate and did not transfer to a Maryland four-year institution • <u>Transferred to Four-Year</u>: Student transferred to a Maryland four-year institution, with or without a degree or certificate. <p><i>Note: The Maryland Higher Education Commission cannot track students who transfer out-of-state.</i></p>
<p>Degree Progress Analysis Cohorts: Students who attempted at least 18 credit hours within two years of matriculation</p>	<ul style="list-style-type: none"> • <u>College Ready</u>: Student required no remediation or developmental education coursework. • <u>Developmental Completer</u>: Student was assessed to need remediation in at least one area, and within four years completed all of the recommended remedial coursework. • <u>Developmental Non-Completer</u>: Student was assessed to need remediation in at least one area and after four years had not completed all of the recommended remedial coursework. • <u>Successful Persister</u>: Student earned at least 30 credits with a cumulative Grade Point Average of at least 2.0 AND either: 1) graduated and/or transferred to a four-year institution; or 2) is still enrolled. <p><i>Note: The Degree Progress Analysis includes information on transfers to out-of-state institutions as obtained by the community colleges from the National Student Clearinghouse and other sources.</i></p>

ANALYSIS

All Students

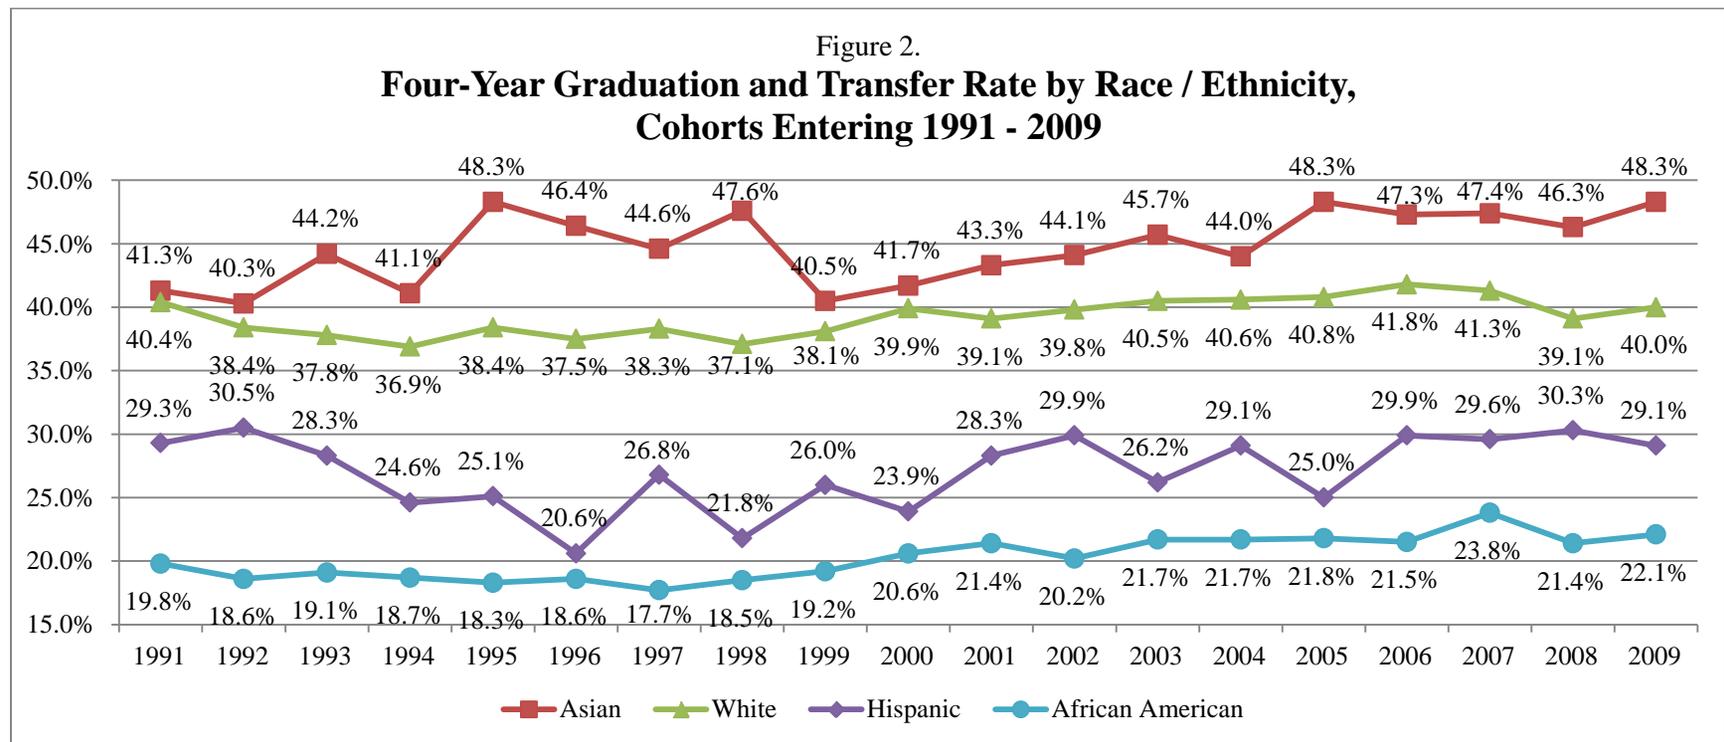

As Figure 1 shows, the overall four-year success rate – including graduated, transferred, and still enrolled students – has declined for the Fall 2009 entering cohort. The overall success rate for the entering cohort of Fall 2009 is 45.3%, 1.3 percentage points lower than the Fall 2008 entering cohort and down 3.4 percentage points from the Fall 2007 high of 48.7%. This also represents the lowest success rate since the Fall 2002 cohort, in which 44.7% of students had graduated, transferred, or remained enrolled after four years. As the figure shows, the decrease in the overall success rate for this most recent cohort is due to a decline in the percentage of students still enrolled after four years, which declined from 13.0% to 11.6%. On the other hand, the Fall 2009 cohort was slightly more likely than Fall 2008 entrants to transfer or graduate, with combined graduation and transfer rates of 33.7% and 33.5%, respectively. However, the Fall 2009 graduation-transfer rate is over two percentage points lower than the four-year rate for Fall 2007 entrants (35.8%).

Figure 1.
**Four-Year Success Rate and Graduation-Transfer Rate, With
 Component Rates, Cohorts Entering 1991 - 2009**

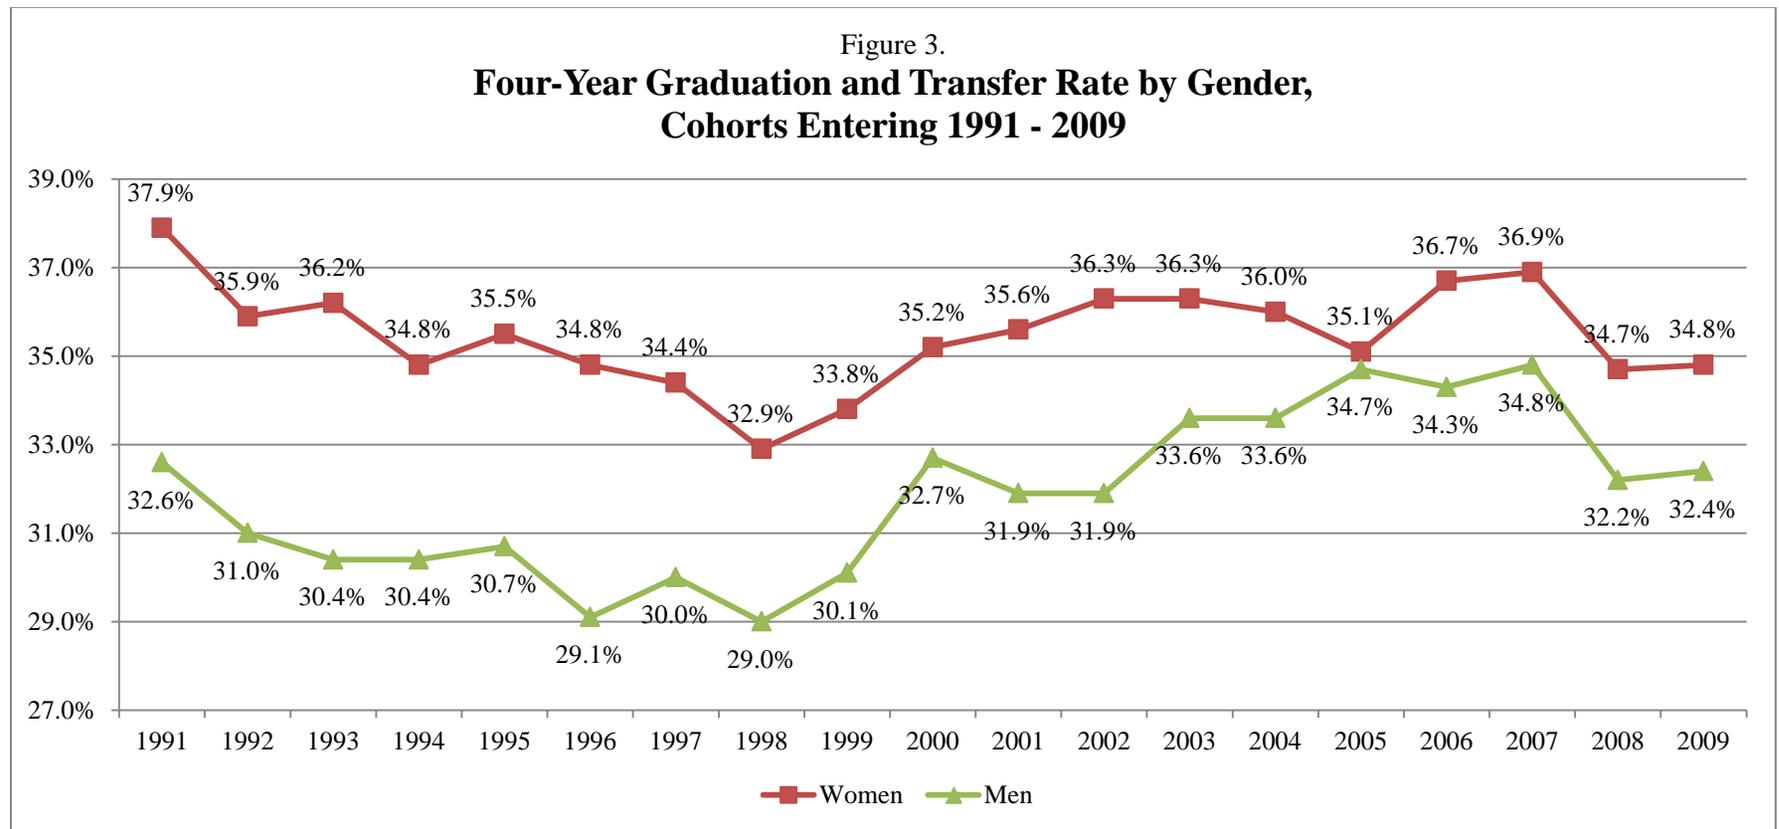

By Racial and Ethnic Group

As Figure 2 illustrates, four-year graduation and transfer rates have continued to vary substantially by race and ethnicity, though the magnitude of those differences has changed over time. In 1991, the gap between the group with the highest transfer and graduation rate (Asian students, 41.3%) and the lowest (African-Americans, 19.8%) was 26.2 percentage points. For the Fall 2009 cohort, the gap decreased slightly, to 21.5 percentage points. Additionally, while graduation and transfer rates by race and ethnicity have fluctuated rather widely from year to year, the long-term (1991 to 2009) trend for both White and Hispanic students has remained relatively stable, decreasing by 0.4 percentage points to 40.0% for White students, and for Hispanic students by 0.2 points to 29.1%. The combined graduation and transfer rates for both Asian and African American students, however, have increased. The rate for Asian students has increased by 7.0 percentage points since 1991 to 48.3%, while the rate for African American students has increased from 19.8% to 22.1% over the same time period.

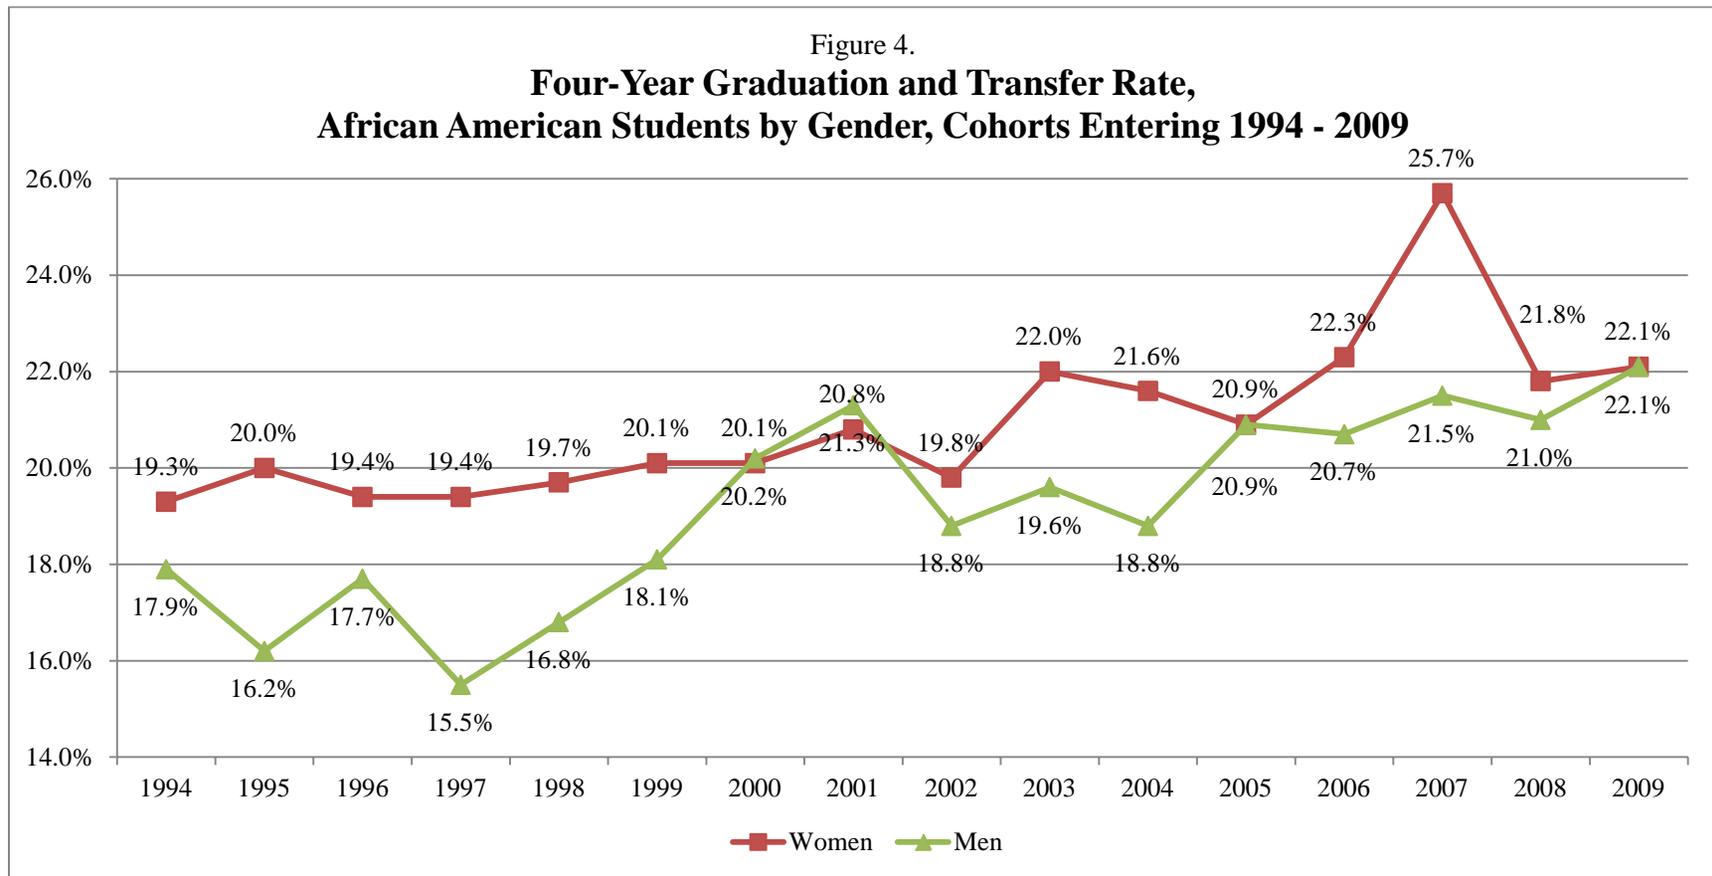

By Gender

As with race and ethnicity, a difference in graduation and transfer rates by gender has persisted over time. As Figure 3 shows, however, this achievement gap has decreased over the period from 1991 to 2009. For the Fall 1991 cohort, 37.9% of female students had either graduated or transferred within four years of matriculation. Meanwhile, 32.6% of male students had accomplished the same, a gap of 5.3 percentage points. Among the Fall 2009 cohort, the achievement gap between males and females had shrunk to 2.4 percentage points, with 34.8% of females and 32.4% of males graduating or transferring within four years. The gap varied widely during that time, reaching as high as 5.8 points in 1993 and as low as 0.4 percentage points in 2005. It should be noted, however, that while the achievement gap has narrowed, the graduation and transfer rates for both males and females have both decreased over time.

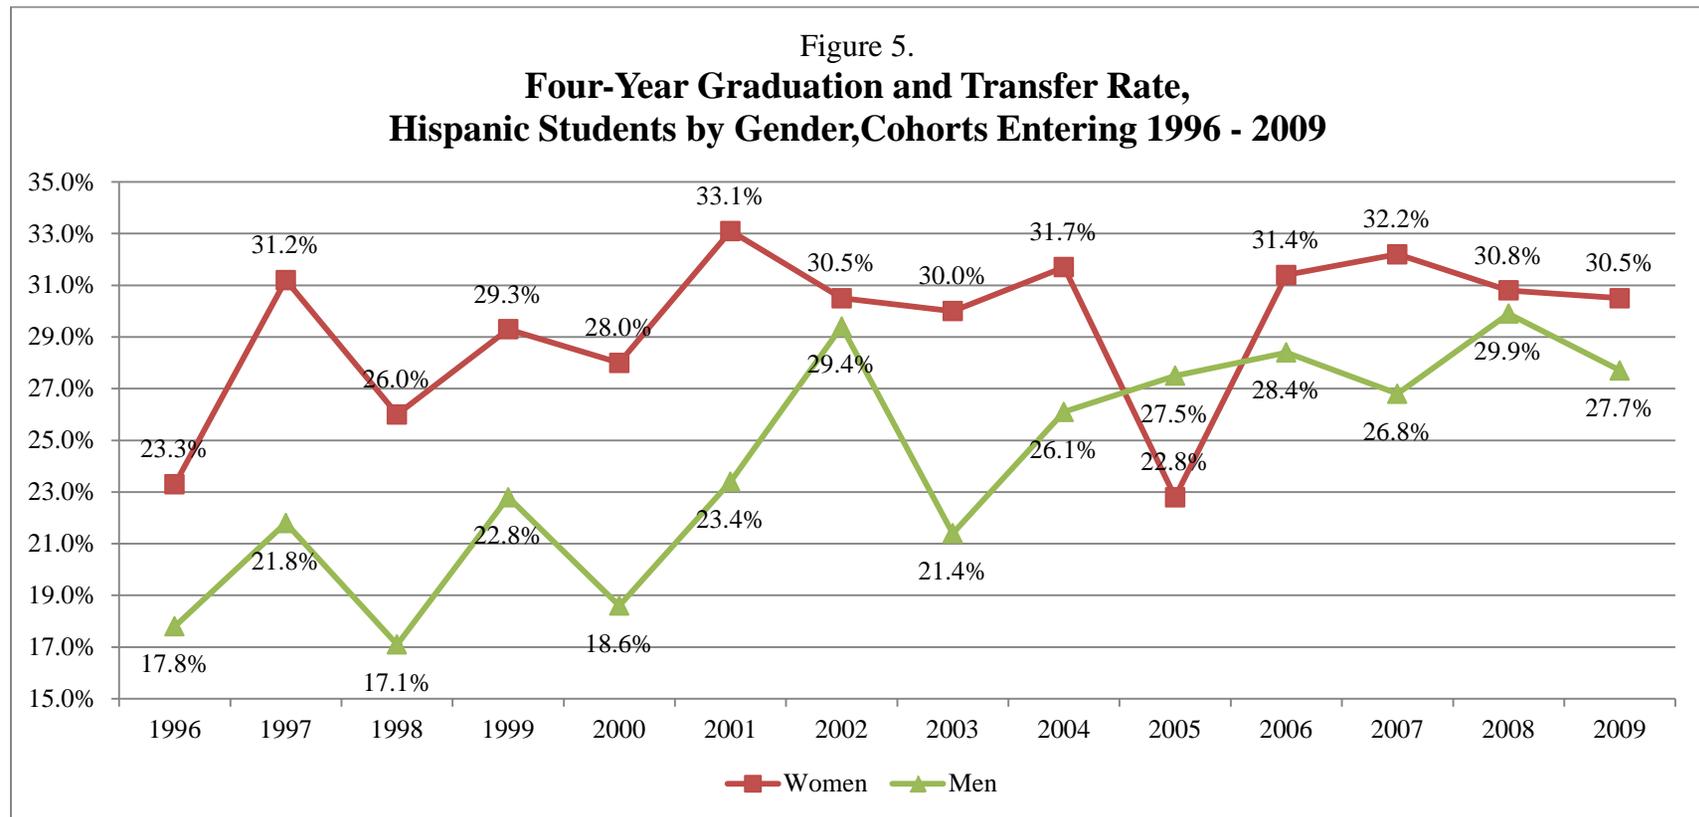

African American Students by Gender

Figure 4 shows the four-year graduation and transfer rates for African American students by gender. For almost all cohorts, African American women have graduated or transferred within four years of entry at higher rates than men. For the 2009 cohort, however, African American men and women graduated or transferred at the same rate, 22.1%. These rates represent increased achievement for both men and women over that of the Fall 2008 cohort, and substantially increased achievement over the past 16 cohorts. Since 1994, the African American female graduation and transfer rate has increased by 2.8 percentage points, from 19.3% to 22.1%, while the African American male student rate has increased by 4.2 percentage points, from 17.9% to 22.1%.

Hispanic Students by Gender

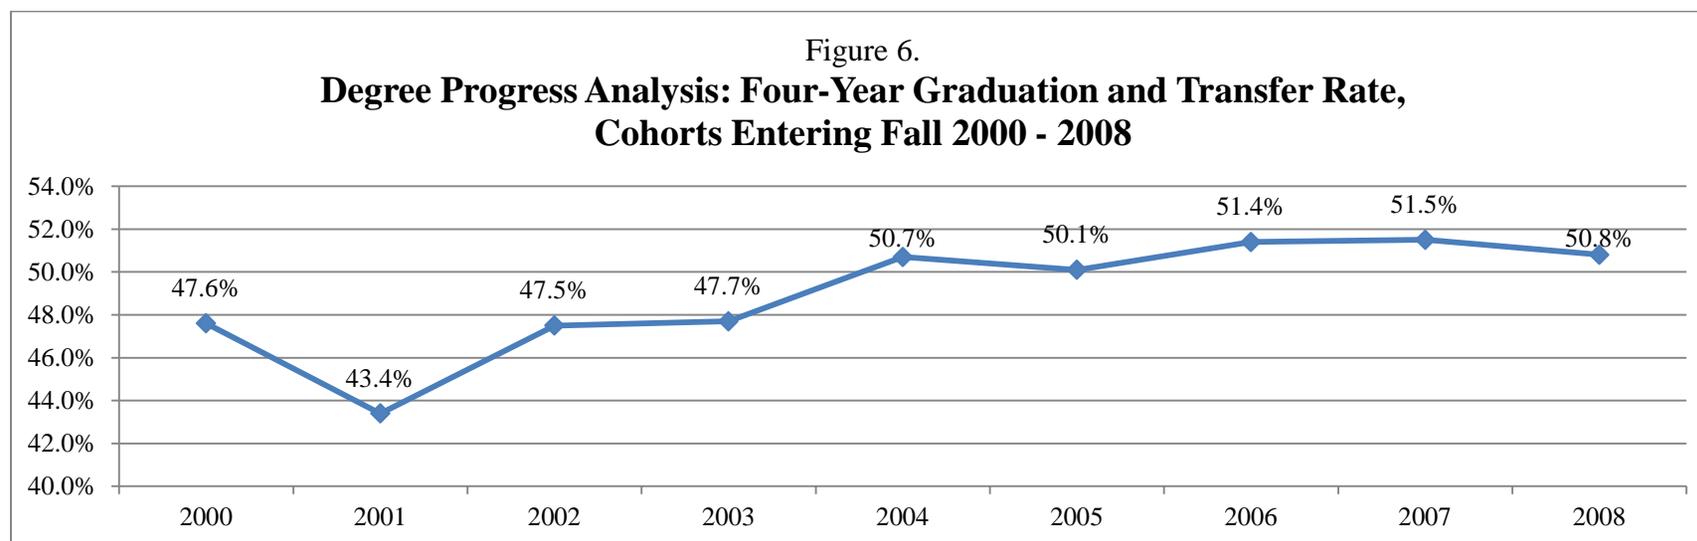

Figure 5 illustrates the four-year graduation and transfer rates for Hispanic students by gender for those cohorts entering between Fall 1996 and Fall 2009. These rates have fluctuated the most widely from year to year due to the small sample size they represent, even at a statewide level. However, with the exception of the 2005 cohort, there is a consistent trend of Hispanic women graduating or transferring within four years at higher rates than men. Over the past fourteen entering cohorts, Hispanic women have graduated or transferred at an average rate of 29.6%, compared to men at 25.1%. For the Fall 2009 cohort this gap stood at 2.8 percentage points, with 30.5% of women and 27.7% of men having accomplished one of those milestones within four years.

DEGREE PROGRESS ANALYSIS

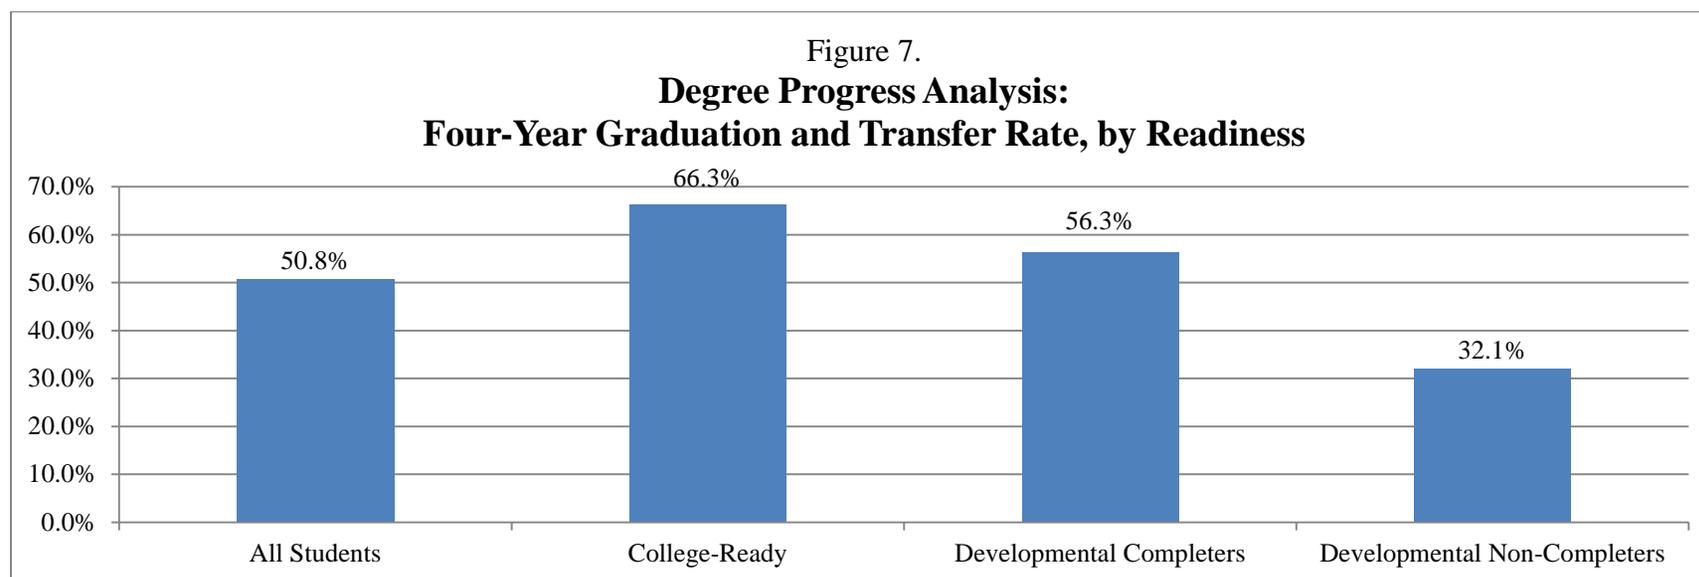

As discussed in the introduction, the Degree Progress Analysis is an alternative method of measuring student success that was developed by Maryland's community colleges in collaboration with MHEC. Rather than examining all first-time, full-time students, as this retention, graduation, and transfer report examines, the Degree Progress Analysis cohort includes all students who entered in a given year and attempted at least 18 credits within their first two years. Of all newly entering students in Fall 2008, 67.0% of students were identified as a part of the Degree Progress Analysis cohort. Among these students, the Degree Progress Analysis reports on students who have graduated or transferred or who are successful or still enrolled. To be classified as successful or still enrolled, students have to either have completed at least 30 credits with a GPA of 2.0 or better, remain enrolled at the original institution, or have graduated or transferred.

The Degree Progress Analysis was first utilized for the Fall 2000 cohort and has been conducted each year since. Figure 6 shows the combined graduation and transfer rate for each cohort during that period. As this chart indicates, 50.8% of students entering in Fall 2008 had graduated or transferred within four years, a slight decrease from the 51.5% of students who had done the same for the prior cohort. Even given the slight decline, the figure shows that the overall graduation and transfer rate has risen by 3.2 percentage points since Fall 2000.

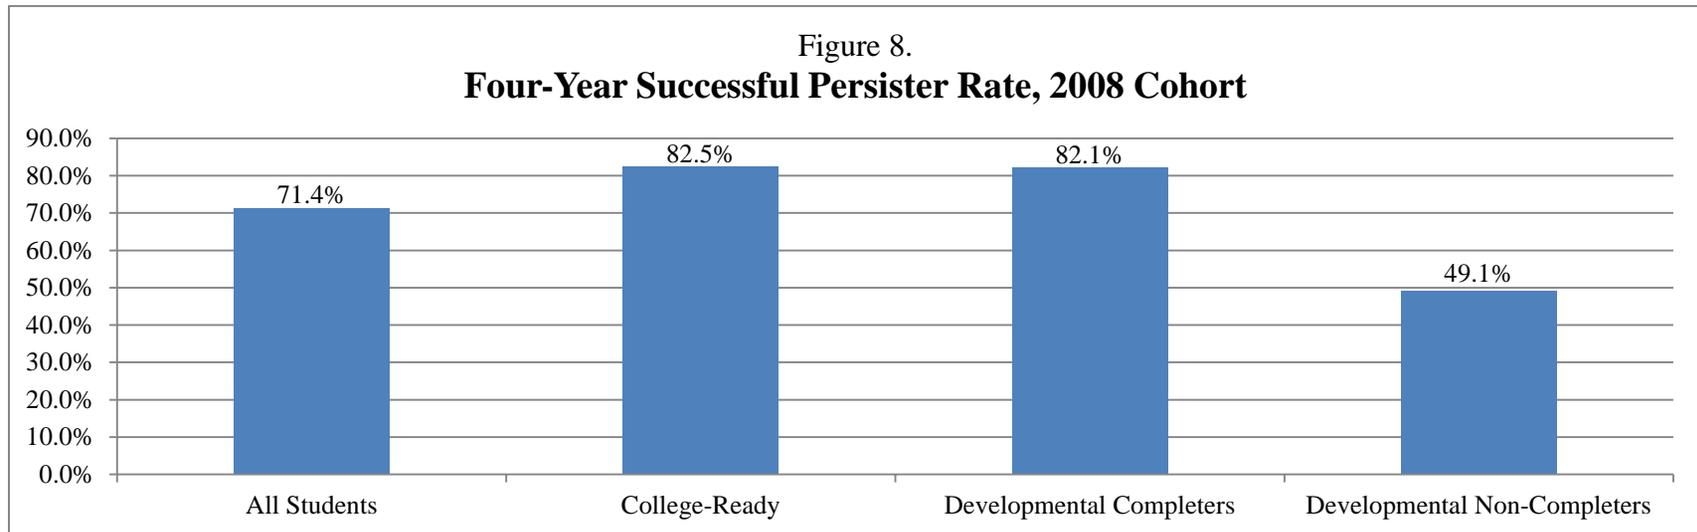

The Degree Progress Analysis also classifies students in three different groups based upon their readiness for credit-bearing coursework at time of matriculation: college-ready, developmental completers, and developmental non-completers. Students who enter as college-ready (24.5% of the 2008 cohort) are those who are not assessed to need any remedial work at the time of matriculation. Developmental completers (42.8% of Fall 2008 entrants) are those students who require remedial work, and complete the sequences to which they have been assigned. Developmental non-completers (32.7% of the 2008 cohort), on the other hand, are students who are assessed to need remediation but do not complete the required courses.

As Figure 7 shows, there is substantial variation in the four-year graduation and transfer rate among the categories of readiness established by the Degree Progress Analysis. Nearly two-thirds of college-ready students graduate or transfer within four years, while less than one-third (32.1%) of developmental non-completers do the same. However, students who complete prescribed developmental coursework graduate or transfer at a rate much higher than those who don't. This substantially higher rate (56.3%) suggests that the assignment to remedial coursework may not be as much an impediment to graduation or transfer as is the failure to complete that coursework.

This achievement gap also extends to the successful persister rate for each of these groups, as Figure 8 illustrates. Students who enroll in and complete developmental coursework are as likely to succeed as college-ready students. Those students who did not complete these courses are far less likely to succeed. While students are not required to enroll in developmental courses, the data suggest that substantial benefits are associated with enrollment in and completion of developmental courses.

COMMUNITY COLLEGE FOLLOW-UP SURVEY

The community college follow-up survey is a tool developed and administered jointly by MHEC and the community colleges, and administered periodically to community college graduates. This survey examines both educational and labor market outcomes, as well as graduates' perceptions of institutional quality and success in preparing them for further study and the workforce. The most recent iteration of the survey was conducted in Fall 2012 of students who received an associate degree or certificate during the 2010-11 academic year.

Since 1980, Maryland community college graduates have expressed satisfaction with the experience at their institution. In 2012, 91.1% of graduates reported that their experience was either "very good" or "good," and this number has exceeded 90% in every survey year since 2002. Additionally, 92.5% of respondents indicated that they would repeat their community college experience.

In total, 52.2% of respondents indicated that they had transferred to a four-year college or university, with 39.4% enrolling full-time and 12.8% part-time. Among graduates actively seeking employment, 54.3% were employed full-time and 32.5% part-time.

Further information on and data from the follow-up survey can be found in the full report, *Follow-Up Survey of 2011 Maryland Community College Graduates*, accessible via the Commission website.

CONCLUSION

Student graduation and transfer rates at Maryland community colleges have remained fairly stable in the past year, though there has been a slight decline in the percentage of students still enrolled. However, while student success rates have declined slightly in the past year, nearly half of students enrolling as first-time, full-time students in Fall 2009 had graduated, transferred, or were still enrolled at their original institution four years later. Additionally, long-term trends indicate that student outcomes continue to improve. These data show that community colleges continue to play an important role in improving educational outcomes for their students and the state.

* Analysis Cohort = students who attempt at least 18 hours within two years of matriculation

** Successful or Still Enrolled is defined as students who completed at least 30 credit hours with a GPA of 2.00 or better, who have graduated and/or

transferred, or who are still enrolled at the institution. Any data is obtained from sources not including the National Student Clearinghouse.

++ Totals reflect summation of cohort data as reported by the colleges, and derived percentages based solely on the reporting institutions. These may provide an "indication" or estimate of the statewide community college success levels, but should not be relied upon as a completely accurate

measure at the statewide level.
